

Abstract

A safety hook including a main shaft, a chain receiving portion disposed at a first end of the main shaft, a first bend disposed at a second end of the main shaft, and a second bend depending from the first bend. The chain receiving portion and the first bend are positioned on the same side as the main shaft and are substantially in-line with each other. The second bend bends in substantially the opposite direction of the first bend and has a terminal end that does not extend beyond the first bend.
